- Price range: \$101,000 - above

DESCRIPTION

This indoor waterfall is classified in our style guide as a Stacked Horizontal Multi-Panel (SHMP). This indicates that there are multiple water panels aligned vertically and horizontally in a given space. We were thrilled to partner with L.F. Driscoll on planning this project for American Water Street in advance of their grand opening! A stunning indoor waterfall flanks either side of the entrance. Fabricated with specialty glass (by others), stainless steel trim, underwater lighting and a reflection pool on the ground level. The floor to ceiling windows echo the design of the stacked panels of glass, creating a complimentary style of elements.

Dimensions: (QTY: 2) 56' T x 22' W
Location: Camden, NJ
