DESCRIPTION

This indoor waterfall project has 3 separate water features: [Qty 2] Blu-Guard Vertical Multi-Panels and a reflection pool with bubblers. Our Blu-Guard system is fully sealed, maintenance-free and can be specified in to most of our frame styles. The VMP's are mirror imaged on either side of the center structure which can be seen from both sets of escalators. The reflection pool joins the two at the base level, creating a visual continuity from the front view. Materials used to construct these indoor waterfalls include brushed stainless steel and clear glass. The color changing side-lighting and underwater lighting creates a soothing vibe to compliment your travel experience at Daytona International Airport in FL, USA.
